# 1 Introduction

Managing Course Registrations, monitoring of students' performance in each course and generating reports are being done on paper since the beginning of schooling. This is time-consuming, cumbersome, hard to maintain in the long-term. This is something that can be automated with a simple-to-use interface by using an Online Course Reservation System.

This Online Course Reservation System will allow students to search and register for courses offered by the university professors. The students will be able to view important details such as progress, grades, attendance etc. for each course they have registered for. The professors will be able to set the curriculum, the lesson plan and the structure of the courses they are teaching. They will be able to create, collect and grade assignments & tests for the students. They will be able to see useful statistical information about the students taking their course and review the performance of each student individually.

## 1.1 Purpose

The purpose of Software Requirements Specification (SRS) document is to describe the external behavior of the Online Course Reservation System. Requirements Specification defines and describes the operations, interfaces, performance, and quality assurance requirements of the Online Course Reservation System. The document also describes the nonfunctional requirements such as the user interfaces. It also describes the design constraints that are to be considered when the system is to be designed, and other factors necessary to provide a complete and comprehensive description of the requirements for the software. The Software Requirements Specification (SRS) captures the complete software requirements for the system.

## 1.2 Scope

The Software Requirements Specification captures all the requirements in a single document. The System provides students the ability to register for courses online as well as monitor their performance in assignments and tests of the courses they have registered for. It allows professors an easy way to manage all the classes that they handle, and have a clear idea of how their students in each course and class are performing, using automatically created reports.

## 1.3 Overview

The SRS will provide a detailed description of the Online Course Reservation System. This document will provide the outline of the requirements, overview of the characteristics and constraints of the system.

### 1.3.1 Section 2

This section of the SRS will provide an overall description of the product with items such as Product Perspective, Product Functions, User Characteristics, Constraints, Assumptions & Dependencies and Requirements.

### 1.3.2 Section 3

This section of SRS contains all the software requirements mentioned in section 2 in detail, sufficient enough to enable designers to design the system to satisfy the requirements and testers to test if the System satisfies those requirements.

## 2 Overall Description

### 2.1 Product perspective

The Online Course reservation system is automated system where professors can create and manage courses and students can register for them. This is proposed for automating the student's course registration and monitoring. The Online Course Reservation System acts as an interface between the Students, Professors and the System Administrator.

### 2.2 Product Functions

The Online Course Reservation system acts as an interface between the Students, System Administrator and the Professors.

The major functions of The System:

1. Students should be able to register, monitor their performance and manage courses that they have registered for.
2. Professors should be able to create, manage and monitor multiple courses courses that they have offered.
3. The System Administrator should be able to manage all users and courses of the System.

### 2.3 User Characteristics

- **Student** - They register for courses, submit assignments posted by the professor handling the course and take up tests posted online.
- **Professor** - They create courses, assignments and tests. They monitor and manage all courses handled by them.

- **System Administrator** - He/She has the privileges to approve the issue of course, to delete a course upon request from the handling Professor.

## 2.4 Constraints

- The applicants require a computer to access course content, submit assignments and take up tests.
- Although the security is given high importance, there is always a chance of intrusion in the web world which requires constant monitoring.

## 2.5 Assumptions And Dependencies

- The users have sufficient knowledge of computers.
- The users know the English language, as the user interface will be provided in English.
- The applicants may be required to scan the documents and send.

# 3 Specific Requirements

This section describes in detail all the functional requirements.

## 3.1 Functionality

### 3.1.1 Login Capabilities

The System shall provide Login capabilities for the Students, Professors and the System Administrator at all times, except during maintenance.

### 3.1.2 Specifically for Students

- Course Catalog of all courses the student is eligible for. The Student should be able to sort/filter the listings
- Course Catalog of Courses that they are currently enrolled in.
- Course Registration Page where a student chooses a course and provides their details
- Course Dashboard where Announcements, Updates, deadlines for assignments and test dates are displayed. It should also have a general forum where the student can discuss with other taking the same course.
- A Course Progress Page where a student can check their attendance, marks, grades and other details that the professor has put up regarding the course.

- A general assignments & tests page, where all assignments due/overdue and upcoming tests across all courses that the student has taken should be displayed.

### **3.1.3 Specifically for Professors**

- Catalog of all courses currently handled by them right after the login page to let them choose which course they want to manage.
- Course Creation Page, in case the professor wants to create a new Course for the upcoming Semester.
- Course Dashboard where Announcements, Updates, deadlines for Assignments and Test Dates are displayed. The professor should also be able to communicate with the students via the general forum.
- Course Assignment/Test Creation Page
- Course Report Generation Page where the professor can generate detailed reports on the performance of the students taking up his course. The report should contain details such as attendance of all the students, scores and grades of all students, statistical data such as the mean & standard deviation of the students' scores.

### **3.1.4 Specifically for System Administrator**

- Details pages for all Professors and Students
- General Announcements Page that can be read by everyone in the System.
- Pending courses page where they can approve/decline new courses offered by Professors. They should be able to provide feedback to the professor, in case they reject the course.

## **3.2 Usability**

- The system shall allow the users to access the system from the Internet. The system uses a web browser as an interface.
- Since all users are familiar with the general usage of browsers, no specific training is required.
- The System has a Graphical Interface and is therefore user friendly and self-explanatory.

### **3.3 Interfaces**

The User interface of the system will include the following Pages:

1. Login page
2. General Announcements Page
3. Current Courses Page
4. Course Catalog Page
5. Course Registration Page
6. Individual Course Dashboard
7. Course Progress Page
8. Assignments & Tests Page
9. Course Creation Page
10. Assignment/Test creation page
11. Course Report Generation Page
12. Professor & Student details page
